

Sibel ÉPIL'HAIR PRO

new

Microwavable depilatory wax

- > EFFECTIVE ON SHORT HAIR
- > READY IN 80 SECONDS!
- > MICROWAVEABLE AND ALSO FOR REGULAR WAX HEATER

Instructions for heating: two ways:

1. Heating in wax heater: Take off the lid. Place the jar in a wax heater and put the thermostat on maximum heating for 20-25 minutes. When the wax starts to melt, place the thermostat on the optimal application temperature of 55-60°C.

2. Quick heating in microwave: Take off the lid and place the jar on the edge of the rotating plate (never in the middle) and heat the oven for 80 seconds. Wait 1 minute before taking out the jar. The heating time can vary depending on the power of the microwave and the remaining quantity in the jar. Once the wax has melted put the jar in a wax heater and keep it on the optimal application temperature of 55-60°C in a wax heater.

Instructions for use: spread a very thin layer of wax with a spatula in the direction of the hair growth. Before the wax totally solidifies, pull the wax off swiftly against the direction of the hair growth.

Caution: do not wax sensitive areas or irritated skin. Avoid to expose waxed areas to the sun for at least 24 hours. Before waxing, make sure that the skin is clean and dry, without traces of grease or sweat. Do not ingest.

Important: to maintain all the properties of the wax, do not exceed 70°C during heating. Streaks may appear on the surface of the wax during heating, but mix the wax until they disappear and apply the wax as instructed.
